Sprint 1 Report

Product: Elevate (Self Improvement Companion)

Product Owner: jssheng

Scrum Master: zwang58

Team Members: elaolive, krosengr, scorzine

Actions to stop doing:

We should stop procrastinating work because it has caused unbalanced workload distribution. All major work were done during one weekend and some members could not demo finished products.

Actions to start doing:

1.We should establish a consistent group meeting schedule and discuss challenges and exchange ideas frequently, since we didn't reach a consensus on how sprint 1 product should function. (In-progress).

2.We should assign more hours to our task effort estimates since most sprint 1 tasks were underestimated such as android studio tutorial and activity/fragment implementations.

3.We should assign specific tasks to each member so we can work on clear objectives on our own time.

Actions to keep doing:

Engaged and innovative meeting sessions.

Learn new skills rapidly and adapt quickly to new requirements and directives.

Reasonable backlog prioritization and cumulative task workload.

Work Completed:

Github Repo Setup

Learn Basic Android development

To-do List interface

Basic UI Interface

Work Still In-progress:

Mood Logging Interface

Learn Firebase

Work Completion Rate:

Four user stories completed

A total of around 40 work hours spread into 4 days.
